

## HIGH ACCURACY BUTTON TEMPERATURE SENSOR

### HATSBTA SERIES

#### PRODUCT DESCRIPTION

The High Accuracy Paintable Button Style Flush-Mount Thermistor and RTD Wall Sensors provide precision room temperature sensing for building automation systems. The HATSBTA Series drastically decreases the footprint of the traditional box sensor so that it becomes virtually invisible once it is painted to match the decor. The active sensing element is made of a highly stable, precision thermistor material or platinum RTD. This design is intended for interior use only is bonded to a plastic paintable housing.

#### TYPICAL INSTALLATION

For complete installation and wiring details, please refer to the product installation instructions.

The temperature sensor installs directly into any wall. Select a suitable installation area in the wall. Do not place the device where the sensor may be subject to air stratification, vibrations, excessive moisture or rapid temperature changes.

**NOTE:** The sensor accuracies listed in the specifications section apply to the sensing element only prior to product assembly and may not be reflected in the complete assembly.

Due to the measurement uncertainty, it is possible, that the true resistance value of the single delivered sensor at  $0^{\circ}\text{C}$  can be out of the defined tolerance class. Profiling each assembly to take into consideration lead wire and the attachment method should be completed.
