

SPLIT-CORE CURRENT SWITCH

SC-610-200

PRODUCT DESCRIPTION

The SC Series current switch monitors line current for electrical loads such as pumps, conveyors, lighting, heaters or fans and closes the output contacts when the trip point is exceeded. The SC-610-200 has a trip point that is adjustable between 2 to 200 Amps by rotating the adjustment pot. A LED illuminates when trip point setting is reached.

The sensor requires no external power as it is totally powered by induction from the AC line being monitored. The switch output is normally open and when the input current exceeds the trip setpoint the switch closes to provide an on/off digital signal to the controller.

The SC-610-200 can be opened to install on an existing wire which eliminates the need to disconnect.

TYPICAL INSTALLATION

For complete installation and wiring details, please refer to the product installation instructions.

The SC-610-200 provides mounting tabs to secure the device inside a motor control panel using (2) # screws.

The sensor has a 2 wire connection to the Building Automation System.
