

GAGE PRESSURE TRANSMITTER GP Series

The gage pressure transmitter is designed with single remote sensor that enables it to accept high pressure in several ranges up to 500 PSI, 35 Bar or 3500 kPa. All models are rated for overload pressure 2X the maximum full scale range and burst pressure of 20X the maximum full scale range.

Features include field selectable pressure ranges and output signal types, output reversal and slow-damping for the most flexible applications. The output signal is factory calibrated and temperature compensated for the highest start-up accuracy. A weatherproof polycarbonate enclosure is provided for ease of installation.

TYPICAL INSTALLATION:

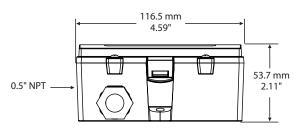

For complete installation and wiring details, please refer to the product installation instructions.

The transmitter mounts on a vertical surface using the two integrated mounting holes. The remote sensor cable connection should be located on the bottom of the enclosure. The two mounting holes will facilitate a #10 size screw (not supplied). Ensure there is enough space around the unit to make the electrical connections and that it is within an acceptable distance for the length of remote sensor cable. Avoid locations with severe vibrations or excessive moisture.
