

Certificate of Compliance - REACH

The European REACH Regulation EC 1907/2006 on Registration, Evaluation, Authorization and restriction of Chemicals affects all companies producing, importing, using, or placing products on the European market. The aim of the REACH regulation is to ensure a high level of protection of human health and the environment from chemical substances.

Greystone Energy Systems fully supports EC 1907/2006 and is committed to providing safe products consistent with the improvement and protection of human health and the environment through the better and earlier identification of the intrinsic properties of chemical substances.

As a manufacturer within the meaning of the Regulation, Greystone Energy Systems is subject to the obligation to inform its customers of any products that contain a substance of very high concern (SVHC) in a mass concentration of more than 0.1% weight by weight (w/w). The current SVHC list and the authentic SVHC Candidate List is published by the European Chemicals Agency which may be accessed at echa.europa.eu.

To comply with the requirements of the REACH Regulation, Greystone Energy Systems has implemented the following procedures:

- require supplier documentation to ensure any SVHC are below acceptable concentrations.
- maintain a directory of supplier REACH compliance certificates for all raw goods.
- evaluate and review REACH requirements periodically to ensure full compliance.

Through reasonable due diligence and based on information from our component suppliers as well as knowledge of the materials used, Greystone Energy Systems certifies that to the best of our knowledge we conform to the requirements of REACH, the European Community Regulation standard about chemicals and their safe use.

Greystone Energy Systems Inc currently conforms to and will continue to conform to the requirements of REACH as new amendments are released. Specifically, the chemical substances listed at <http://echa.europa.eu/web/guest/candidate-list-table> are not present in our products for quantities totaling over one ton per producer a year, and are not present above a concentration of 0.1% weight by weight (w/w).
